

# Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

ServiceNow Micro-Project

PHASE 5 | PROJECT DEVELOPMENT PHASE

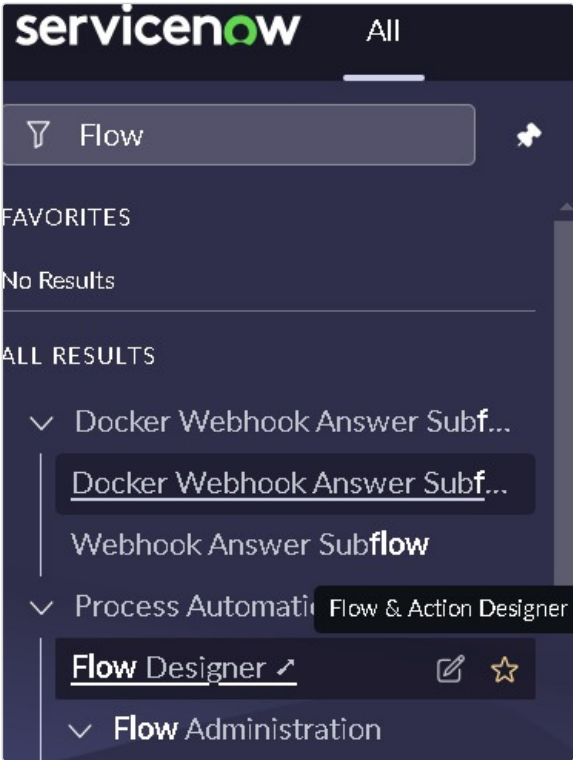

## 5. Project Development Phase

This phase implements the design defined in Phase 3, following the three milestones from Phase 4. Each step reflects the actual configuration performed on the ServiceNow instance, with output screens captured directly from the build.

### 5.1 Milestone 1: Flow — Creating the Flow

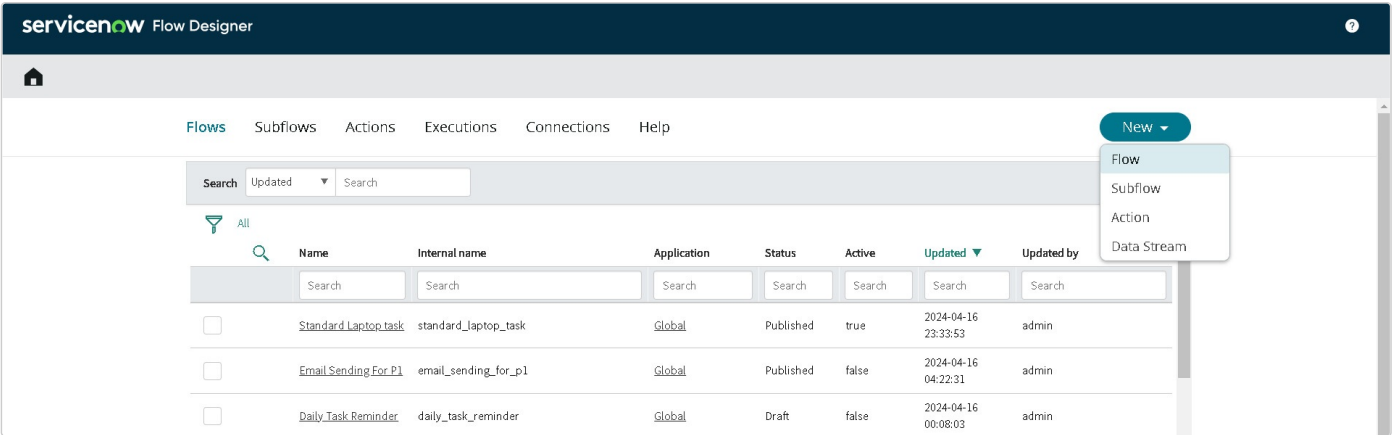

**Activity 1:** Create a Flow to create a Catalog Task that updates the short description after the Service Request is approved, and assigns it to the Hardware group.

- 1. Open ServiceNow.
- 2. Click on **All** → **search for Flow Designer**.
- 3. Click on **Flow Designer** under Process Automation.

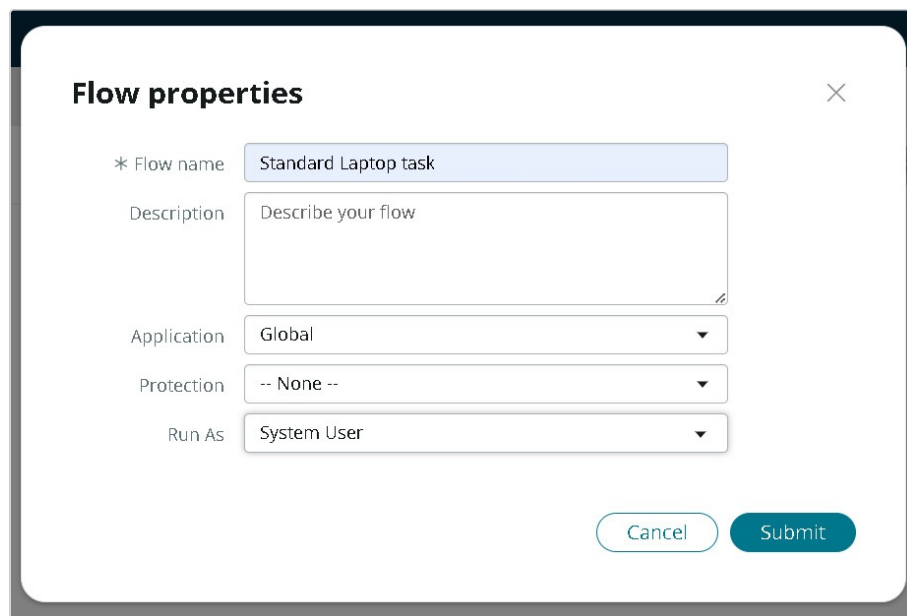

Output screen — Navigating to Flow Designer under Process Automation.

- 4. After opening Flow Designer, click on **New** and select **Flow**.
- 5. Under Flow properties, give Flow Name as **Standard Laptop task**.
- 6. Application should be **Global**.
- 7. Select Run As **System User**.
- 8. Click on **Submit**.

Output screen — Flow Designer list showing the new "Standard Laptop task" entry.

**Flow properties** [Close]

\* Flow name:

Description:

Application:

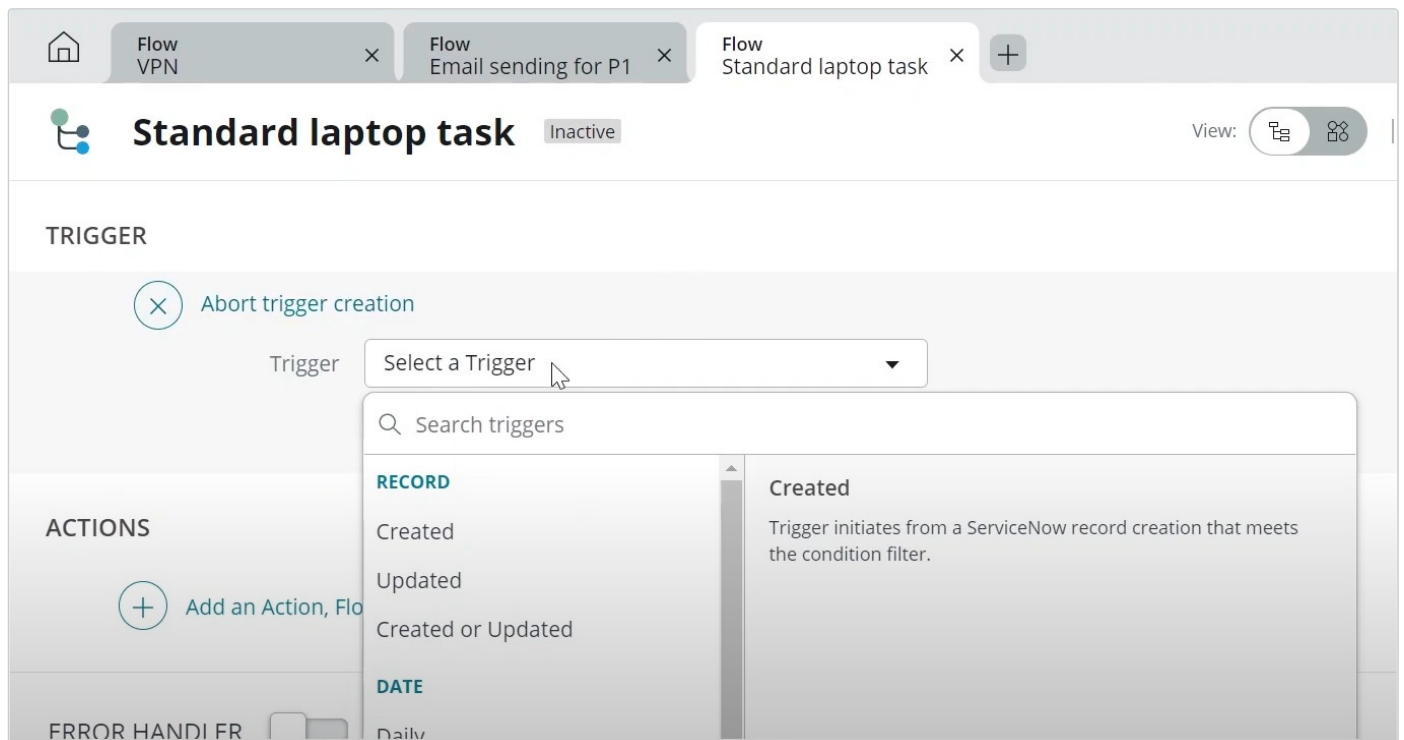

Protection:

Run As:

Output screen — Flow properties dialog with Flow name, Application (Global) and Run As (System User) set.

## 5.2 Configuring the Trigger

1. Click on **Add a trigger**.
2. Select the trigger — search for **Service Catalog** and select it.
3. Click on **Done**.

Advanced Options

Output screen — Service Catalog trigger configured for the Standard Laptop task flow.

## 5.3 Configuring the Action

1. Under Actions, click on **Add an action**.
2. Search for **Create Catalog Task** and select it.
3. Drag and drop the Requested Item record into the Request Item field; the table auto-populates as Catalog Task.

4. Set Short Description as Laptop needs to Configured.
5. Click **Add field value** and set:
  - Description = Laptop needs to Configured
  - Assignment group = Hardware
  - Approval = Approved
6. Leave the remaining fields as default and click **Done**.
7. Click **Save**, then click **Activate** (and confirm Activate again).

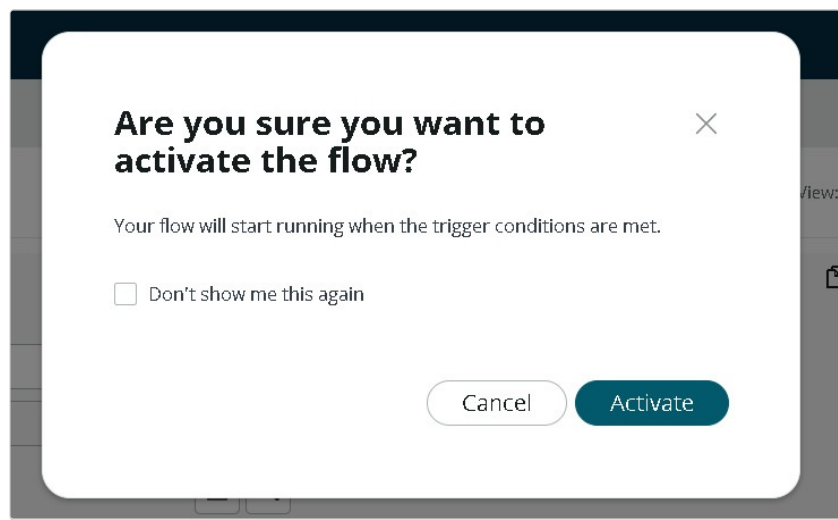

Output screen — Searching for and selecting the "Create Catalog Task" action.

The screenshot shows the 'Standard Laptop task' interface with the 'Create Catalog Task' action fully configured. The configuration includes:

- Action: Create Catalog Task
- Table Name: Catalog Task [sc\_task]
- \* Requested Item [Requested Item]: Trigger - ... ▶ Requested Item ...
- Short Description: Laptop needs to Configured
- Fields:
  - Description: Laptop needs to Configured
  - Assignment group: Hardware
  - Approval: Approved
- Wait: ☒
- Template Catalog: Select Template Catalog Item

Output screen — Create Catalog Task action fully configured: Request Item mapped, Short Description, and field values for Description, Assignment group (Hardware), and Approval (Approved).

Output screen — Activation confirmation dialog for the Standard Laptop task flow.

## 5.4 Milestone 2: Flow Assignment to the Catalog Item

**Activity 1:** Assign the flow to the Standard Laptop service catalog item.

1. Open ServiceNow, click on **All** and search for **Maintain Items**, then select it.
2. Under the Name field, search for **Standard Laptop** and select that record.
3. Under that record, select the **Process Engine** tab.
4. Remove any existing automations and add the **Flow** field.
5. Add the flow created earlier — *Standard Laptop* task.
6. Save the record.

The screenshot shows the ServiceNow interface. On the left is a dark sidebar with the 'servicenow' logo and a search bar containing 'mainta'. Below the search bar are sections for 'FAVORITES' (showing 'No Results') and 'ALL RESULTS' (listing 'Service Catalog', 'Catalog Definitions', 'Maintain Catalogs', 'Maintain Categories', 'Maintain Dynamic Categories', 'Maintain Items', 'Maintain Cart Layouts', 'Service Catalog Wizards', and 'Maintain Wizards'). The main area is titled 'Catalog Items' and has a search bar with 'for text' and a 'Search' button. Below the search bar is a breadcrumb trail: 'All &gt; Type!= Bundle &gt; Class != Order guide &gt; Type!= Package &gt; Class != Content Item &gt; Published item is empty &gt; Name starts with standard'. A table of catalog items is displayed with columns: Name, Short description, Active, Roles, Catalogs, Category, Price, Type, and Updated. The first row is highlighted and shows 'Standard Laptop' with a description 'Lenovo - Carbonx1', 'Active' status 'true', 'Roles' 'Search', 'Catalogs' 'Search', 'Category' 'Hardware', 'Price' '\$1,100.00', 'Type' 'Item', and 'Updated' '2024-04-16 04:14:53'. Other rows include 'Standard 27" Monitor', 'Standard 22" Monitor', and 'Standard 24" Monitor'.

Output screen — Maintain Items catalog list, locating the Standard Laptop record.

Output screen — Catalog Task record opened, confirming Approval = Approved, Short description and Description = "Laptop needs to Configured".

The "Standard Laptop task" Flow was successfully built, triggered by the Service Catalog, bound to the Standard Laptop catalog item's Process Engine, and verified end-to-end: placing and approving an order automatically created a correctly pre-filled Catalog Task assigned to the Hardware team. Development is now ready for structured testing (Phase 6).
